Year of Manufacture: 20____

Serial Number: VTX ________________ Date: ____/____/______

(Please log your machine’s serial number and date of purchase for future reference.)
## Introduction

Congratulations, you have chosen a VASTEX conveyor curing system. VASTEX has been designing and building dryers since 1960 and has the knowledge and expertise to supply a quality dryer and help you keep it running for years to come. VASTEX has innovated many of the features found in conveyor ovens today from control methods, modular features, air movements and belt tracking.

Your Vastex Infrared Dryer has been Factory tested and burned in for a period of 2-8 hours. All components are tested to be sure they work correctly when the Dryer leaves our factory.

## Environmental Conditions

Your conveyor dryer must be operated in a controlled environment to achieve best performance, longest service life, and to take advantage of an industry leading warranty period. Failure to follow these guidelines may result in machine damage and warranty being void.

**Ambient Operating Temperature:** No less than 40°F(5°C) and no more than 100°F(37°C)

**Maximum Humidity:** 80%

**Maximum Duty cycle:** 18 hrs @ 70°F(21°C)

Your dryer must be powered down for 30 minutes if it is to be operated in excess of recommended Run Time. Please see chart.

## Safety

The Instruction Manual and Safety Instructions must be read and understood by anyone operating the Vastex Conveyor Curing System.

- The operator should read and understand the instruction manual before operating this equipment. Store instruction manual and safety instructions near equipment for easy access to operators.
- VASTEX Conveyor Curing System is intended for the curing of non-flammable inks on screen printed materials. Do not use for any other purpose unless authorized by Vastex International, Inc. Use of this equipment for any other purpose can be dangerous and may cause damage to this equipment, voiding the warranty.
- It is recommended that the area around this equipment be designated as a work area and only authorized employees be allowed in the area.
- Children and pets must be kept clear of the work area.
- Do not place any objects on top of the drying chamber. Surfaces are hot!
- Never leave equipment unattended.
- Do not operate conveyor or dryer with any cover or guard removed.
- Operator must be familiar with controls of the dryer and conveyor.
- Never put excessive load on the conveyor belt.
• Before starting production, the operator must check that all covers and guards are in place, no material has been left on the conveyor, and the work area is clear of obstructions.

• Switch on and verify conveyor belt is moving before turning on the heat.

• Allow dryer to cool to 300°F (149°C) before switching off conveyor.

• Always turn off power at the main disconnect at the end of production.

• In case an abnormal symptom occurs, for example excessive vibration, noise, and strong smell or smoke development, turn off the VASTEX Conveyor Curing System and contact a qualified technician.

• Immediately turn off the VASTEX Conveyor Curing System if products become jammed in the drying chamber or conveyor belt.

• Do not remove any cover or guard until power at the main disconnect is switched off and locked out. No unauthorized persons are to be allowed inside the control boxes.

• Turn off and lock out power at the main disconnect before any cleaning or maintenance.

• Only qualified technicians should be allowed to make repairs on the VASTEX Conveyor Curing System.

• **Noise and vibration:** This equipment does not produce noise exceeding 70 dB(A) at workstations.

• CE Declaration of Conformity available upon request.

• **Stability during use, transportation, assembly, dismantling when out of service, testing, and foreseeable breakdowns:** This equipment is designed and expected to be stable during all foreseeable conditions, so long as the procedures and instructions given in this manual are followed.

• **Safe handling, transport, and storage:** Before storing the unit, follow the shutdown procedure on Pg.11 (or on the front of your machine) to allow the heater assembly to cool properly. No special handling considerations are necessary, except to be aware of the weight of the equipment and take standard precautions for moving such weights:

  - ER-II-30: 350 lbs (159 kg), 87” x 49” x 53” (221 cm x 124 cm x 135 cm)
  - ER-II-54: 650 lbs (295 kg), 87” x 73.5” x 53” (221 cm x 187 cm x 135 cm)
  - ER-III-30: 550 lbs (250 kg), 106” x 49” x 53” (269 cm x 124 cm x 135 cm)
  - ER-III-54: 850 lbs (386 kg), 106” x 73.5” x 53” (269 cm x 187 cm x 135 cm)

---

**Important**

**REMOVE THE CLEAR HEATER / SENSOR PROTECTOR SHEET BEFORE OPERATING THE DRYER**

(protector sheet is located between the heater face and the sensor bracket)

- At the end of all shifts and / or production runs, follow the Dryer Shutdown Procedure posted on the front of the dryer and in Dryer Operation.

- Any restriction in the dryer exhaust may result in excessive heat buildup within the chamber. More information in Dryer & Exhaust Hood Ducting page.

**Placing your equipment into service and using your machine:**

To place your machine into service:

- Read and understand Component Identification, Controls, Operation, and Safety pages.
- Follow Assembly pages before powering up machine

To use your machine, follow the instructions found in Operation.
Assembly (1of5)

Tools Needed: (1) Crowbar or Claw Hammer, (2) 9/16" open end wrenches, (1) 7/16" open end wrench or socket, (1) 1/4" nut driver or flat blade screw driver, (1) 1/8" allen wrench

Econored-II-54 shown for illustration purposes. Econored II and III are assembled and operated in the same manner. Econored-III has a 3rd heater and is 18"(45.7cm) longer than Econored-II

1) Cut straps with tin snip

2) Using crow bar or claw hammer, pry off plywood carefully

3) Remove all wood supports

Caution!
The heating chamber sits on top of the conveyor pins. Lifting the chamber will separate the chamber from conveyor.

4) Remove front and rear conveyor pieces, additional (optional) legs, and any boxes shipped underneath chamber.
   -Use 9/16 or 15mm socket/wrench to remove lag bolts

5) Remove side runner to slide machine off pallet.
   -Use 9/16 or 15mm socket/wrench to remove lag bolts
3) Carefully slide the dryer and conveyor assembly off the pallet and onto the shop floor. **Lift from Conveyor Sides only. Do not lift from Conveyor Bed!**

**Caution!**
The heating chamber sits on top of the conveyor pins. Lifting the chamber will separate the chamber from conveyor.

4) Position front end section (section without motor) on the floor in the front of the dryer as shown. Locate 3/8 bolts, square washers, and serrated locking nuts from hardware bag. Two 9/16” wrenches are required. Raise one side and attach with hardware as shown below through the upper mounting hole. Do not tighten at this time. Carefully raise the other side and insert both upper and lower bolts and nuts. Install remaining bolt on first side and tighten all bolts. Use the same procedure for installing rear end section. Be sure all end section mounting bolts are tight before continuing.
5) Install Dryer ducting. CFM cannot be reduced by more than 10% at exit of ducting. An exhaust booster must be used if CFM is reduced more than 10% due to length of duct or amount of bends. Please seek professional advice if this is not your area of expertise.

Proper venting is important for safety of operator and work area as well as quality of product.
7) Have a licensed electrician complete the electrical hook-up and fill out the warranty card. Send it back to Vastex to validate your warranty. A wiring diagram has been included with this manual, and is also adhered to the inside of the control box cover.

8) Plug the wire from the conveyor motor into the motor cpc connector. (Shown on Controls page 2)

9) Have a licensed electrician test the shops voltage at the machines disconnect, for shops with less than 240V service, it is necessary to auto tune your controller. This procedure can be found in the Troubleshooting section.

Please record your shops actual voltage here:_____________________

- Review spec tag and wiring diagram for electrical requirements.
- FLA refers to Full Load Amps, NOT the recommended line size.
- A licensed electrician should perform electrical installation.
- Please follow the NEC for wire selection and sizing.
- Do NOT use solid or aluminum wiring for main power hookup.
- All connections, especially power hookup, should be checked and tightened after one month of operation.
9) Install the crank handle onto the shaft on top of the chamber. Align set screw to the flat on shaft and tighten with 1/8” allen wrench. Raise heaters to full up position.

10) The belt needs to be installed as shown in the diagram below. For dryers with an (optional) rear drive idler, please see Optional Drive Idler page. Be sure the belt is routed over all braces on the conveyor and over the Aligner. To connect your belt, align the Alligator Lace and install the pin.

11) The belt needs to be tightened and adjusted. To tighten and adjust the belt, use the Aligner Bolts. To raise the Aligner, turn the Aligner Bolt clockwise with a 7/16” wrench. To lower it, turn it counter clockwise. Start with the belt centered on the pulley.

12) To track the belt and continue machine setup, follow Startup Procedure in Operation page 1. To track the belt, follow instructions found on Belt Tracking page.

13) Install OPTIONAL conveyor end caps on 3 corners.
The corner of the dryer with the motor installed has a unique cover that is pre-installed. End caps are installed with (4) #8 sht-metal screws each as shown below.
Features:
- Drive Idler Provides additional grip on rear pulley.
- Required on machines over 17’ (5m) in length

After conveyor belt is installed, adjust Drive Roller Tensioner to achieve 4” as shown.

**Note:** The conveyor belt should be adjusted at the front aligner end to maintain the belt centered on the pulleys. See manual page 6 for belt tracking.
**Belt Tracking**

(Move in small increments while belt is moving. Do not leave conveyor running unattended.)

- If the belt is slipping, add belt tension by raising equally both sides of aligner roller. 1”-2” of belt sag at the bottom side is desirable. To raise roller turn adjustor bolt clockwise.

- **Belt moving to the left**, raise left side of aligner by turning aligner bolt clockwise 1/2 turn at a time.

- **Belt moving to the right**, raise right side of aligner by turning aligner bolt clockwise 1/2 turn at a time.

- If belt is tracking off center at the drive roller, slightly loosen bearing bolts, (2) 1/2” wrenches needed. Turn adjustor screw clockwise to move belt toward motor end of pulley and counter clockwise to move belt away from motor end of pulley, retighten all bolts. Recheck belt tracking at front end.

**Note:** Do not over-tighten belt, 1” to 2” belt sag is desirable.
Conveyor Components

IR Heater
The infrared heaters in VASTEX dryers emit medium wave infrared heat, perfect for curing plastisol inks. The heater connections are located in the trough on the right side of the heater, connected with high temperature terminals and stainless steel socket head cap screws.

J Sensor
Vastex uses a mineral insulated “Type J” Thermocouple mounted under the first heating element on the right side. It is shielded to provide a near "closed loop" control system. The sensor reacts very quickly to heater changes and is designed to be aware of changes in the chamber’s environment. The sensor is wired to the Digital Temperature Controller found on the control panel. Refer to wiring diagram when replacing “J” Sensor. (If SBER is displayed on controller, “J” Sensor is malfunctioning)

Control Box
The Control Box contains most electrical components and is designed for easy maintenance. Connections should be checked after the first (3) months of use and every (6) months after. More information on the Control Box can be found in the Controls sections.

Crank Handle
Used to raise and lower IR Heater assembly. Turning the handle clockwise raises the elements, counterclockwise lowers them. Vastex dryers use three variables to control the curing process, 1) Belt speed, 2) Temperature and 3) Heater height (Heater Focusing).

Exhaust Stack
8” exhaust stack. See Dryer & Exhaust Hood Ducting for proper venting.
(Note: Restricting the dryers exhaust can affect the operation of the dryer causing excessive heat buildup within the chamber and fumes to fill the chamber and work area. The excessive heat buildup in the chamber may damage the dryers exhaust blower. Proper venting is important.)

Filtered Intake
Filters the incoming air. Clean or replace this filter often and as needed, replacement filters p/n (06-22-040)

Conveyor Components

Belt
The conveyor belt is made of Teflon coated fiberglass. It is joined together with an alligator lace using a steel pin to connect each side. The belt will not burn under normal conditions, but the dryer should always have the belt moving while the heaters are above 300 degrees. The belt should remain tracked in the center of each pulley. (See "Belt Installation and Tracking" for adjustment instructions.)

Aligner
The aligner is a device for tracking the belt and keeping it on the pulley. As the belt moves from side to side the aligner is used for adjustments to keep it centered. The belt does not have to be perfectly centered on the pulley but should not be hanging over either edge.

Pulley
The pulleys at either end of the conveyor are made by VASTEX of 4 ½ inch steel tubing with ¾ inch center shaft. They are mounted on self aligning flange bearing blocks for precision rolling.

Gear Motor
A 130 Volt DC gear motor is located to the rear of the conveyor. It drives the rear pulley and belt with a roller and a #35 chain. Replacement part numbers can be found on your dryer’s wiring diagram.
Heat Switch: Controls power to heater only.

Temperature Control: Set and control temperature here. See Page 14 for Controller information.

Relay Output Light: This 250 volt RED pilot light is wired to the output side of the relay. This light will cycle on & off with the control output light. It verifies that the relay is working properly. 1 light per relay is used.

Heater Light: This 6 volt WHITE pilot light is wired to the IR Heaters. One light per heater is used. These lights indicate when electricity is flowing through each heater.

Control Output Light: A 250 volt GREEN pilot light is wired to the output side of the temperature controller. This light should cycle on & off with the controller. It verifies that the controller output voltage is going to the relay coil.

Power Lights: Wired to the non-fused load switch. 1 for single phase, 2 for 3 phase. Will be illuminated whenever the load switch is in the on position. At the end of the day, the machine should be disconnected so the light(s) is/are out.

DC Volt Meter: Digital Volt Meter displays, in volts, the amount of power going to the belt motor. This makes setting and adjusting belt speed much easier. A table showing the time associated with voltage can be found in Dryer Operation.

Belt Speed Control: An AC-DC converter is mounted to the face of the control panel which allows the operator to vary the DC volts to the motor.

Power Switch: Controls power to Controls. Shutting this switch off does not make it safe to open the Control Box. Shut off power at main disconnect before servicing. Power Light must be out before entering any part of this machine.

Components found inside control box.

Relays: ECONORED Dryers are equipped with SSR (Solid State Relays). The relays are the switching devices which send the power to the heaters. The relay coil is wired to lug #9 on the digital temperature controller. As the controller gets a signal from the sensor, for heating or cooling, the relay opens and closes its solid state contactor to modulate power and maintain a consistent temperature. On 208V - 240V units, each relay is wired to an output light which helps to monitor their operation.

Fuses: Two system fuses are found in the control box, and protect the internal electronics.
Control Box cover removal and replacement

Removal
1) Disconnect Switch MUST be in the OFF position to remove control box cover.
2) Remove all sheet metal screws.(5 on the front, 2 on the top. Use a flat blade screw driver or 1/4” nut driver)
   - Control box cover is “hooked” on the top and bottom
3) Pull the bottom of control box towards you slightly to unhook.
4) Lift up slightly, to unhook top of cover, and pull straight off.

Note: Cover cannot be removed with the disconnect in the ON position. The handle and shaft are keyed to prevent this.

Installation is the reverse of Removal. Be sure to leave the disconnect in the OFF position for correct alignment to the handle.
Control System Summary:
The control system in your dryer is called a "closed loop system". The system includes a Digital Controller mounted to the control panel, a Sensor mounted in a shield under the heater, a relay and an Infrared Heater. The digital controller is set to the desired temperature and the Sensor measures the temperature at the face of the heater. The sensor reports back to the control, and the relay switches the heat on and off to the heater.

Operation Tips
- While machine is in operation, it is necessary to have the belt moving while the heater is above 300°F (149°C).
- Allow approximately 15 minutes for dryer to reach 700°F - 800°F (371° - 427°C).
- If no garments are being run through the dryer for more than 10 minutes, it is recommended to lower the heat set point to 500°F (260°C). It will take approximately 10 minutes to return to operating temperature.
- Periodically check ink temperature at the exit of the dryer. It is recommended that you check the temperature of the ink towards the outside of the printed image.
- When checking temperature with a laser gun, shoot the ink while it is still under the heater.

Startup Procedure
1. Rotate main power switch to ON: The red Power Light will illuminate. Main Power Switch located on side of control box.
2. Check belt path: Remove any objects from the conveyor and belt.
3. Turn on Power Switch: Power is sent to the heater switch, belt speed controller, and the exhaust fan will start.
4. Turn on Conveyor: Set speed to desired setting.
5. Turn on Heat Switch: Turn on the Temperature Controllers.

How to determine Temperature set point:
The sensor is located directly under the heater so it will read a much higher temperature than seen at the garment. Set the temperature several hundred degrees higher to compensate for this difference. A non contact heat gun can be used to read the temperature of the ink at the end of the dryer where it is still under the last heater. Take into consideration the thickness of the ink when using the heat gun. It will measure the top layer of the ink. If the ink is very thick you must add a buffer to be sure cure temperature is reached throughout the ink. Temperature set point, heater distance to the garment, and belt speed will all affect the ink temp.

Curing Plastisol with infrared:
Plastisol ink can fully cure in approximately 20-30* seconds. The ink must achieve 310°-320°F (154°-160°C) to cure and fuse to the garment. We recommend* a starting temperature 800°F (427°C), 3° heater height and a belt speed of 25 seconds in the chamber.

Discharge or water based:
Water based products require more time than plastisol to cure due to the fact that the water/moisture must be evaporated before the ink can cure. We have seen cure times from 50 to 90* seconds to achieve a full cure or discharge and not damage the garment. Please note as the time is increased the temperature must be decreased to protect the garment from scorching.

*Actual cure times can vary depending on conditions such as garment moisture and color, ink color, ink thickness, and environmental conditions. All three variables should be used to maximize production while insuring a proper cure.
7 Set the temperature: With the power on, push and hold the up arrow, the (SV) will climb. The longer you hold the but-
tton, the faster the (SV) will climb, it will start climbing by one, then ten, then hundreds. Set the
desired temperature and allow approximately 15 minutes for heat up.
-Refer to the Troubleshooting section for Controller Error Messages.

8 Set the Heater Height: Rotate the Hand Crank on top of the Dryer Chamber, clockwise to raise the heaters, and
counter-clockwise to lower them. Set the desired heater height for your job. It is recommended
to run the heater height at about 2" - 3" above the garment.

9 Set the Belt Speed: Rotate the Belt Speed Control Knob clockwise to increase speed and counter-clockwise to
decrease it. Refer to the example chart below for Time Through Chamber settings. For Plas-
tisol inks, a good starting point is 20-25 seconds in the chamber.

Time through chamber
As explained on the Controls page, your Vastex dryer displays Voltage sent to the motor in reference to Conveyor
speed. Below you will find an example chart relating Voltage to Time Through Chamber. Time Through Chamber is the
time it takes an object to travel from the beginning to the end of the Heat Chamber. This is also known as “Time in Heat”.

- Example time chart shown below.
- Specific chart for your machine can be found on a label on the control box.
- Times below may not pertain to your machine.
- Always verify times with label on machine and Stop Watch.

*** Shutdown Procedure ***

1 Turn off Heat Switch: Turn the Heat Switch off. Allow the heaters to drop to a maximum of 300°F (149°C) before
turning off the conveyor.

2 Turn off Conveyor: (optional) Once the dryer cools down to 300°F (149°C) or lower, turn the Belt Speed down
to the off position, skip this step if leaving the conveyor belt speed set for the following shift.

3 Turn off Power Switch: Turn the Power Switch to STOP only after dryer has cooled to 300°F (149°C) or lower.
Verify that the only Diagnostic light still on is the Power Light.

4 Rotate main power switch to OFF: The dryer must be shut off via the Main Power Switch at the end of every shift.

At this point, no lights should be illuminated on the Control Box.

Always follow dryer shutdown procedure at the end of all shifts and / or production runs. The Dryer Shutdown Procedure is also defined on a label affixed to the front of the dryer.
Caution! Power must be turned off at the external disconnect, or the machine unplugged, before entering any part of this machine. The red Power Light labeled “Power” must be off!! A qualified electrician should perform any internal testing requiring power on!

### Drive Chain Adjustment (Standard)

1) To remove the chain guard, unfasten the four black sheet metal screws. Be sure to replace the guard after adjustment is made.

2) To adjust the drive chain you will need to loosen the four mounting screws. The gear motor mounting plate is slotted to allow for chain adjustment. Adjust the chain so there is a max of 1/4" vertical movement in the chain.

   **CAUTION! Do not over tighten chain, damage to bearings may occur.**

3) Check that both set screws/bolts on each sprocket are tight before re-installing the Chain guard. A 1/8" and 3/16" Allen Key is required.

### Drive Chain Adjustment (Optional) SHD Drive

1) To remove the chain guard, unfasten the five black sheet metal screws. Be sure to replace the guard after adjustment is made.

2) To adjust the drive chain you will need to loosen the four mounting screws. The gear motor mounting plate is slotted to allow for chain adjustment. Adjust the chain so there is a max of 1/4" horizontal movement in the chain.

   **CAUTION! Do not over tighten chain, damage to bearings may occur.**

3) Check that both set screws/bolts on each sprocket are tight before re-installing the Chain guard. A 1/8" and 3/16" Allen Key is required.
Belt Speed Min/Max Adjustment

Setting the low speed pot adjustment: The low speed pot should be set so the belt (or sprocket) moves very slow at the lowest setting on the controller, just before the controller is clicked in the off position.

Setting the High speed pot adjustment: The high setting is set so 130 VDC is the maximum voltage to the motor, a volt meter is needed for the high speed adjustment.

Temperature Controller

Auto Tuning
Automatic Tuning has been performed at factory for all machines. Automatic Tuning must be performed by the customer for the following reasons; When equipment is other than 240v (e.g. 208v), replacing a controller, replacing a “J” sensor, and/or new heating elements. Controller set point value must be set between 650° - 700°F (343° - 371°C) before beginning auto-tuning. Auto tuning should only be performed when the heater temperature is below 300° F (150° C).

Procedure:
1. Press the return key for at least 6 seconds (maximum 16 seconds). This initializes the auto-tune function.
2. The decimal point in the lower right hand corner of the PV display flashes to indicate that auto-tuning is in progress. Auto-tune is complete when flashing stops
3. Automatic Tuning may take up to ½ hour. Remember, while the display point flashes, the controller is autotuning.

Note: If an AT error (AtEr) occurs, the automatic tuning process is aborted due to the system operating in ON-OFF control mode (PB=0). The process will also be aborted if the set point is set too close to the process temperature or if there is insufficient capacity in the system to reach the set point (e.g. inadequate heating power available). Upon completion of auto-tuning the new PID settings are automatically entered into the controller’s non-volatile memory.

Manual Mode
In the event of a faulty J Sensor, the display will read “SbEr”. Entering manual mode will bypass the faulty sensor and allow you to run your dryer manually. Press and hold both the scroll and return key for 6 seconds to enter manual mode. Display on controller will show H000. Press the up or down arrow to set percentage of time the heater will cycle on and off. (i.e. a setting of 80.0 will cycle heater on 80% of time and off 20%). Controller can remain in this mode while resuming production.

Celsius / Fahrenheit
The temperature controller on your Vastex Infrared dryer is normally set to Fahrenheit as a default. Follow the procedure below to switch the controller from Fahrenheit to Celsius.

1. Press and hold the Scroll Key button for 6 seconds. When you let go, the display will change to “ASPI” and a numerical value will be given.
2. Press the Scroll key 6 times to display the letters “Id” and a numerical value will be given again.
3. Press and hold the Scroll Key for 6 seconds. Release the button and the display will change to “LoCL” and a numerical value given.
4. Press the Scroll key 6 times to display the letters “CF”. If machine is set to display Fahrenheit, this value will be 0. If the machine is set to Celsius, this value will be “1”
5. To change the controller from Fahrenheit to Celsius:
   - Press the Up Key one time to change the displayed number to “1”. The display will now read in Celsius.
6. To change the controller from Celsius to Fahrenheit:
   - Press the Down Key one time to change the displayed number to “0”. The display will now read in Fahrenheit
7. Press the Return Key one time to take you back to normal operation
### Troubleshooting (2of2)

<table>
<thead>
<tr>

1. Buyer’s order will constitute an offer in accordance with the terms hereof and such offer, upon acknowledgment of Seller, will constitute the agreement between Buyer and Seller. Buyer’s order after such acknowledgment by Seller will not be subject to cancellation, change or reduction in amount, or suspension by Buyer of deliveries, unless prior to such action Buyer has obtained Seller’s written consent. Notwithstanding anything to the contrary in Buyer’s Purchase Order or other communications, the parties agree to be bound by these Terms and Conditions, which supersede all other documents including Buyer’s Purchase Order or other communications, and any orders or representations by any of Seller’s representatives. Any of these terms, conditions and provisions of Buyer’s order which are inconsistent with Seller’s acknowledgment and these Terms and Conditions of Sale shall not be binding on the Seller and shall be considered not applicable to any sale so made. No waiver, alteration or modification of any of the provisions on either side of the document shall be binding on Seller unless agreed to in writing by Seller.

2. All prices are F.O.B. Seller’s Plant and method of delivery and routing shall be at Seller’s discretion, unless specifically otherwise stated herein. Notwithstanding anything herein to the contrary, Seller shall have no liability for alleged defects with the products which are not specified in written notice from the Buyer to the Seller and shall be considered not applicable to any sale so made. No waiver, alteration or modification of any of the provisions on either side of the document shall be binding on Seller unless agreed to in writing by Seller.

3. (a) All prices are F.O.B. Seller’s Plant and method of delivery and routing shall be at Seller’s discretion, unless specifically otherwise stated herein. Notwithstanding any agreement to pay freight, delivery of products purchased hereunder to a common carrier or licensed trucker shall constitute delivery to Buyer and be determinative of the date and time of shipment and all risk of loss or damage in transit shall be borne by Buyer. If the Buyer fails to accept the goods from the common carrier or licensed trucker, the Seller shall be entitled to claim payment from the Buyer. Seller shall arrange for storage, the risk and the cost, including insurance costs, to be borne by the Buyer (and Buyer agrees to pay such amounts upon demand) except if the failure to accept delivery is due to any of the exceptions noted in Paragraph 4.

(b) Terms of payment shall be as stated on invoice. If Buyer fails to pay freight charges as stated on invoice, Buyer shall be liable for consequential damages.

4. Buyer’s order after such acknowledgment by Seller will not be subject to cancellation, change or reduction in amount, or suspension by Buyer of deliveries, unless prior to such action Buyer has obtained Seller’s written consent. Notwithstanding anything to the contrary in Buyer’s Purchase Order or other communications, the parties agree to be bound by these Terms and Conditions, which supersede all other documents including Buyer’s Purchase Order or other communications, and any orders or representations by any of Seller’s representatives. Any of these terms, conditions and provisions of Buyer’s order which are inconsistent with Seller’s acknowledgment and these Terms and Conditions of Sale shall not be binding on the Seller and shall be considered not applicable to any sale so made. No waiver, alteration or modification of any of the provisions on either side of the document shall be binding on Seller unless agreed to in writing by Seller.

5. It is understood that deliveries will be made in accordance with Seller’s regular production schedule. Every reasonable effort will be made to meet the Buyer’s required delivery dates but Seller will not be liable for damages or even in default by reason of any failure to deliver or delay in delivery due to any preference, priority or allotment order issued by the Government, whether or not in aid of a state of war, or any cause whether of Government, fires, floods, epidemics, quarantine restrictions, strikes, lockouts, freight embargoes, severe weather, unavailability of materials or shipping space, delays of carriers or suppliers or delays of any subcontractors. Should delay in delivery be caused by any of the circumstances mentioned in this paragraph, such extension of the delivery period shall be granted by the circumstances cited above. In the event a delay caused by an event not specifically mentioned in this paragraph, damages will be limited to cancellation of the purchase order without penalty, and refund of any monies deposited or prepaid on the purchase order with no liability for any consequential or incidental damages.

6. Seller reserves the right to increase the prices prior to Seller’s acceptance of order and/or after expiration of any price quoted by Seller.

7. Unless otherwise stated in writing, Seller’s prices do not include sales, excise, value-added or other taxes. Consequently, in addition to the price specified herein, the amount of any present or future sales, use, excise, value-added or other tax, and all such taxes, duties, and fees imposed on or occasioned by the manufacture, sale, purchase or use of the products hereunder shall be paid by Buyer, or in lieu thereof, Buyer shall provide Seller with a valid tax exemption certificate acceptable to the taxing authorities.

8. Seller reserves the right, at any time, to revoke any credit extended to Buyer because of Buyer’s failure to pay for any products when due or for any other reason deemed good and sufficient by Seller and in such event, all subsequent shipments will be paid for prior to delivery at Seller’s option.

9. Seller’s LIABILITY SHALL BE LIMITED TO SELLER’S STATED SELLING PRICE PER UNIT OF ANY DEFECTIVE GOODS AND SHALL IN NO EVENT INCLUDE BUYER’S MANUFACTURING COSTS, LOST PROFITS, GOODWILL, OR ANY OTHER SPECIAL, INDIRECT, INCIDENTAL OR CONSEQUENTIAL DAMAGES, ARISING OUT OF THE AGREEMENT, THIS CONTRACT, THE SALE OF THE PRODUCTS TO THE BUYER OR THE USE OR PERFORMANCE OF THE PRODUCTS. Seller may at its discretion repair, replace or give the Buyer credit (pro-rated) for such defective products.

10. Seller shall have no liability for alleged defects with the products which are not specified in written notice from the Buyer to the Seller within thirty-six (36) months from the date of shipment of machines. Seller shall pass to Buyer any warranty received by Seller from the manufacturer of Limited Life Components, which in most cases is 12 to 18 months. Seller shall have no liability under this Limited Warranty unless Buyer has paid in full for the products. Further, this Limited Warranty is expressly contingent on Buyer’s delivery to Seller, all costs prepaid, the defective part(s) within thirty-six (36) months of shipment to Buyer, together with a written statement specifying the alleged defect(s). Any replacement part(s) shall be shipped to Buyer on a C.O.D. basis.

11. Seller’s SOLE EXCLUSIVE REMEDIES PROVIDED TO THE BUYER ARE REPAIR, REPLACEMENT OR CREDIT, AS EVIDENCED BY RETURN RECEIPTS AND TIERS. SELLER DISCLAIMS THE WARRANTY OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE.

12. The remedies herein reserved by Seller shall be cumulative and in addition to any other legal remedies available to the Buyer. No waiver of a breach of any portion of this contract shall constitute a waiver of continuing or future breach of such provision or of any other provisions hereof.

13. These Terms and Conditions constitute the entire agreement of the parties. No amendments, changes, revisions or discharges hereof in whole or in part shall have any force or effect unless set forth in writing and signed by the parties hereto. This contract shall not be assignable by Buyer voluntarily by operation of law or otherwise without Seller’s written consent.

14. This agreement shall inure to the benefit of and be binding upon the parties hereto, their respective successors and permitted assigns.
